Flexopack presents monomaterial solution suitable for the most demanding consumer packaging applications: MonoFresh™

Flexopack, a leading manufacturer of innovative, value-creating flexible packaging solutions, developed a new, monomaterial-based thermoforming film solution. Designed for recycling, this new thermoforming film is suitable for the most demanding consumer packaging applications. Excellent formability, superior package integrity, accompanied by crystal-clear optical properties, ensure the finest product presentation. Addition of specialized EVOH guarantees the highest possible protection from O₂ ingress.

Available in a wide range of thicknesses, transparent or tinted can be the ideal packaging thermoforming concept for meat, poultry, fish or dairy markets. Suitable also for sous-vide applications, MonoFresh™ can guarantee the full replacement of conventional, multi-material thermoforming films.

Certified by CYCLOS regarding recyclability and in compliance to OPRL guidelines, MonoFresh™ is the solution that every retail oriented producer would like to incorporate in their process.

Flexopack continues to collaborate with strategic value chain partners for the flexible packaging industry, to develop its range of monomaterial solutions for flexible packaging.

As part of its vision for a circular economy of plastics, Flexopack aims to develop novel polyolefin-based solutions, which are widely accepted in recycling streams worldwide and are designed with the recycling criterion in mind.
