Flexopack presents VSP Ultra Permeable for Fish & Seafood applications: Flexion™ 10K

Flexopack manufacture some of the most advanced skin films in the world for fish & seafood packaging applications.

Flexion™ 10K is specially developed to meet the fish packaging industry needs for an ultra-permeable to Oxygen (O₂) vacuum skin packaging film. This need is dictated by the market requirement to avoid any development of anaerobic-origin toxins during the product packaging cycle.

Our 10K range of skin products provide many benefits:

- Ultra-high permeability to O₂ (> 10,000cc/m²/24h)
- Low and High profile options delivering a film solution, whatever the product or profile
- High gloss and optics showcasing the best of the product
- Wide seal window allowing optimal sealing to a large range of substrates (including PE, PP, PET)
- Customized opening characteristics

Fresh or frozen fish, crabs, oysters, either raw or processed, can go through the whole distribution chain with zero nutritional loss, safely packed in our solutions.

Flexopack Group is a leading producer of flexible packaging used by major meat and cheese industries globally. Proudly celebrating 40 years of operational excellence, with multiple production facilities and subsidiaries around the world.

With significant presence across the Americas, Europe, Oceania and Asia, Flexopack offers expert advice on providing the best solutions for each customer.
